

Handoff Evaluation — SAMPLE

FR-009 · the debrief artifact (AI-scored, instructor-confirmed, FORMATIVE) · **ALL CONTENT FICTIONAL**

Student: (off-going role) · **Patient:** Margaret Hale (sample) · **Coverage:** 7 / 11 elements (64%) · **High-risk misses:** 4 · **Self-rating:** 8 / 10 — the gap between those two numbers is the lesson.

Coverage map (binary, vs the context pack)

#	Element	Said?	Transcript evidence
1	Identity & situation	✓	"This is Margaret Hale in 12, 74, came in last night with pneumonia, right side."
2	Illness severity	✗ MISS	Never stated explicitly.
3	Background (allergy + code status)	✗ MISS	Allergy stated; code status never mentioned.
4	Current assessment	✓	"Temp's coming down, 38.1 from 38.9, sats 94 on two litres..."
5	Meds & treatments	✓	"Ceftriaxone next at nine tonight, Azithro in the morning, Tylenol PRN, last at one-thirty."
6	Lines / access	✓	"Twenty-gauge left forearm, day two, looks fine."
7	Pending items	✗ MISS	Blood cultures + repeat CBC never mentioned.
8	Safety risks	✓	"She's a falls risk, bed alarm's on."
9	Anticipatory guidance	✗ MISS	No if-then until the AI receiver asked.
10	Receiver synthesis	✓	AI-initiated read-back; student confirmed. (Receiver-initiated — note for debrief.)
11	Responsibility transfer	✓	"Okay, I've got her."

Perception vs performance (the verbal survey)

Survey answer (voice, transcribed)	What the record shows	Verdict
"Eight out of ten. I covered her meds, vitals, the IV, pretty much everything important."	64% coverage; 4 high-risk misses	Overestimate (+~2) — mirrors the published 8.1-vs-7.1 peer-inflation finding
"Maybe I didn't say much about her family situation."	Actual misses: severity · code status · pending cultures/CBC · watch-fors	Blind spot — none of the real gaps self-identified

"If her breathing gets worse or the fever comes back, escalate."	2 of 3 authored contingencies recalled when asked directly	Knows the content — didn't volunteer it during the handoff (the teachable distinction)
--	--	---

Debrief prompts (auto-generated)

For discussion
The receiver had to ask about code status and the pending cultures — in a real handoff, what happens at 02:00 when nobody asks?
You knew the watch-fors when the survey asked. What would make them automatic in the report itself?
Your self-rating was 8/10 against a measured 64%. Where does that gap come from — and what's the cost of it clinically?
Scoring: binary element coverage (validated-instrument design lesson), AI-assisted against the context pack, every line instructor-confirmable before release to the student. FORMATIVE — not a grade.
